The Risk Metrics Company

FOR IMMEDIATE RELEASE

Symbiot Awarded e-Management Federal Resale Account

AUSTIN, TEXAS – January 18, 2007 – Symbiot, Inc. today announced the availability of its award winning Risk Metric devices through e-Management on the GSA schedule to federal accounts. Symbiot currently has three products listed on the schedule:

The Symbiot 3200	For Perimeter Networks up to 64 nodes
The Symbiot 5600	For Perimeter Networks up to 512 nodes
The Symbiot 7200	For aggregation of Symbiot 3200/5600 data streams

Symbiot's Risk Metric solutions simplify and automate the reporting requirements necessary to remain compliant with ongoing regulatory burdens. Symbiot's appliances make scoring a group of network environments as easy as reading a thermometer. At a glance, assess your overall threat profile, vulnerability index and potential loss. Symbiot's solutions are easy to use, easy to install and simplify operations from an unknown time commitment down to a few hours a week. Symbiot's Risk Metric Scoring solves the hard problem of distilling thousands of security alerts per minute down to an "at a glance" network health measurement. This summary score is ideal for use in highly regulated heterogeneous environments by technical professionals who have limited time and resources to devote to keeping vigilant on IT security threats.

About Symbiot

Symbiot is the leader in the applying Risk Metrics to the measurement and management of network security events. Symbiot's solutions provide real-time, intelligent, predictive tools for managing and analyzing streams of security event data. Symbiot's products rely on well-established, world-class inference and knowledge management engines. Symbiot's advanced developments represent some novel departures from the market norm. The company's approach to information security operates from the network fabric up, and is based on proprietary R&D that supports the Federal Government and other commercial strategic alliances. Symbiot quantifies network risks into simple scores using long-term attacker profiling, behavioral modeling and defender vulnerability. Symbiot's Risk Metric solutions dramatically optimizes the flow of network traffic into a system of measurement, visualization and reporting that can be relied on as a decision support system by technical managers faced with growing security concerns.
